

K-FLASH™ is a 100% mechanically watertight flashing system.

Textured, powder-coated black finish blends well with all asphalt shingles.

Made of aluminum, K-FLASH™ is lightweight and easy to install between roof-mount block and L-bracket.

K-RACK™ is manufactured from high-strength, commercial grade extruded aluminum and packaged with stainless steel hardware. K-RACK™ allows for quick installation and easy cable management.

K-RACK™ can be purchased as individual components or as part of a standard kit.

K-RACK™ is a complete solar panel racking system that is ideal for asphalt and steel pitched roofs, ground mounts, agricultural, commercial and industrial flat roofs. Our system can also be used to roof-mount satellite dishes and small antennas.

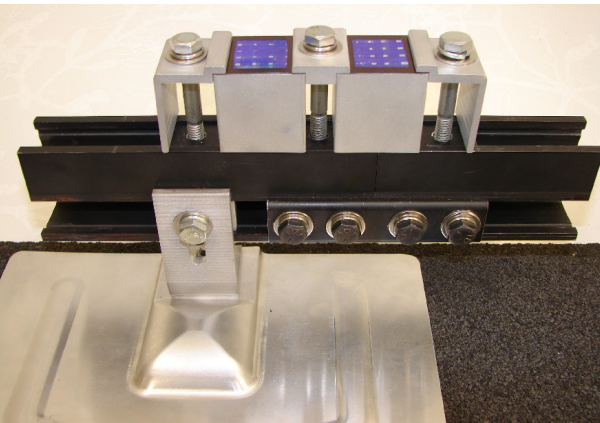

Pictured below is our steel roof mount on a Vicwest roof.

K-RACK™ comes in clear-coat, anodized aluminum. Customized colours may be special-ordered.

K-RACK™ is stocked in standard lengths from 10' 2" up to 20 feet and can be custom-ordered up to 24 foot lengths.
